

Title:

“Applying exponential technologies to reach scale in developing countries – a human centered design case study to reach a world without hunger”

Description:

Recent trends in exponential technologies for a world without hunger by 2030 and illustrative examples, will be showcased during this interactive session.

Since 2016, such innovation projects have been supported by the UN World Food Programme Innovation Accelerator and were designed using human centered design and lean start-up methodology.

There will also be an open floor for discussion to hear from the audience exponential ideas to end hunger.
